

CANADIAN BALL HOCKEY ASSOCIATION TECHNICAL BULLETIN – JUNE 18/10

Attn: Provincial Governing Bodies
CBHA Officials

New goaltending pads approved for use in CBHA play.

REASON Y Ball Hockey/Inline PRO-Series 'Slider' goalie pads

DEFINING FEATURE:

1. The pads have distinctive plastic glides on the inner part which allows goaltenders to slide from side to side more similar to ice hockey.
2. The glides are deemed safe for use as long as they are part of the manufactured pad, which is the case with this product.

It is anticipated that other manufacturers may follow with similar technology in the near future, please keep this in mind. We will advise as we become aware of them.

Product description:

Ballhockey/Inline PRO-series 'slider' goalie pads

Our new line, Ballhockey/inline Pro-series slider pads, possesses everything what modern goalies need. We developed the system of gliding plates, which allows you to slide on ball hockey and inline hockey surfaces. The gliding plates are replaceable in case of excessive wear, which extends life span of this unique product. The kinesiologically structured knee cradle provides comfort and does not restrict the vertical movement. Two types of interchangeable shoe straps, keeps the pad in place down low in sliding movement. The material provides the durability and protection of an ice hockey pad but is lightweight and flexible for floor mobility.
